| Composition/Information | n on Ingredients | |
|---|--|---------|
| CAS: 1344-28-1 EINECS: 215-691-6 RTECS: BD120000 | Aluminum oxide | 60-70% |
| NLP: 500-033-5 | Bisphenol-A-(epichlorohydrin) epoxy resin Aquatic Chronic 2, H411 Skin Irrit. 2, H315; Eye Irrit. 2A, H319; Skin Sens. 1, H317 | 20-<25% |
| CAS: 74398-71-3 EC number: 616-085-8 | 1, 2, 3-Propanetriyl ester of 12-(oxiranylmethoxy)-9-octadecanoic acid Skin Sens. 1, H317 | 5-<10% |
| CAS: 67762-90-7 EC number: 614-122-2 | Siloxanes and Silicones, di-Me, reaction products with silica | 1-2.5% |
| CAS: 1333-86-4 EINECS: 215-609-9 RTECS: FF5800000 | Carbon black | 0.1-<1% |

The Classifications were based on the Toxicological and Ecological Data of the substances/mixtures in the Section 11 and 12.

4 First-aid measures

Description of First Aid Measures

General Information

Symptoms may be delayed several hours after exposure; victims should be medically observed for at least 48 hours after exposure. Ensure medical personnel are aware of exposure and take precautions for their personal protection; see Section 8 for the information of personal protection.

- After Inhalation
- Remove victim from exposure to fresh air. Keep person at rest. Provide oxygen if person is not breathing. In case of unconsciousness place patient stably in side position for transportation. Supply fresh air; consult doctor in case of complaints.
- After Skin Contact

Remove all contaminated clothing and wash before reuse.

Wash contaminated skin with water and soap and rinse thoroughly. Seek immediate medical advice.

After Eve Contact

Immediately bathe eyes for 15 minutes under running water. Immediately remove contact lenses if present. Continue rinsing. Seek immédiate medical advice.

After Swallowing If victim is unconscious; never give anything by mouth. If victim is conscious; rinse out mouth and give victim small amounts of water.

Seek medical treatment in case of complaints.

After Exposure Seek medical treatment in case of complaints.

5 Fire-fighting measures

Extinguishing Media Suitable Extinguishing Agent(s) Use fire fighting measures and extinguishing agents that suit the environment. In case of fire, suitable extinguishing agents are: Alcohol resistant foam. Dry chemical or fire-extinguishing powder. Carbon dioxide (CO_2) .

Water spray or water fog. Unsuitable Extinguishing Agent(s) Water with full jet

· Firefighting Procedures

Fireighting Procedures Isolate fire and deny unnecessary entry. Immediately withdraw all personnel from the area in case of rising sound from venting safety device. Eliminate all ignition sources if safe to do so. Do not extinguish fire unless flow can be stopped. Fight fire remotely due to the risk of explosion. Solid stream of water may spread fire; use water spray or water fog. Cool all affected containers with flooding quantities of water. Burning liquids may be moved by flushing with water; protect personnel and minimize property damage. Contain fire water runoff if possible to prevent environmental pollution.

Special Hazards Arising in Fire Will not burn unless preheated. In case of fire, following can be released:

Phenolic compounds

Formaldehyde, a skin and lung sensitizer and a regulated carcinogen, may be formed during fires. Carbon dioxide (CO₂) and Carbon monoxide (CO) Aluminum oxide (Al₂O₃) dust, a serious respiratory irritant, may be formed during fires. Silicon oxide (SiO₂)

Advice for Firefighters

If employees are expected to fight fires, they must be trained and equipped as stated in the OSHA fire brigades standard (29 CFR 1910.156).

As with any fire, wear positive-pressure self-contained breathing apparatus and full protective gear that are NIOSH approved.

(Contd. of page 2)

6 Accidental release measures Personal Precautions Do not breathe gas, vapors, dusts or mists if their inhalable particles occur during use Ensure personnel take precautions for their personal protection during clean up; see Section 8 for the specific requirements. **Environmental Precautions** Keep away from sewage system or other water courses; do not penetrate ground/soil. Inform respective authorities in case of any seepage to the environment. **Cleaning Up Methods** Cleaning Up Methods Ensure adequate ventilation. Eliminate all ignition sources. Keep unauthorized personnel away. Absorb residues with liquid-binding materials. Avoid confined spaces, such as sewers, because of the possibility of an explosion. Ventilate and wash area after clean-up is complete. Collect spills in suitable and properly labeled containers. Do not use solvents unless following safe handling practices and within the recommended exposure guidelines. Dispose contaminated chemicals as waste according to Section 13. 7 Handling and storage Handling Precautions for Safe Handling Obtain special instruction before use; do not handle until all safety precautions have been read and understood. Obtain special instruction before use; do not nancie until all safety precautions have been r Do not breathe gas, vapors, dusts or mists if their inhalable particles occur during handling. Handle in well ventilated work space. Keep away from incompatible material(s). Avoid any release into the environment. Observe all the personal protection requirements in Section 8. Information about Protection Against Explosions and Fires Will not burn unless preheated Will not burn unless preheated. Keep away from heat, sparks, open flame and other ignition sources during handling. Storage Requirements to be Met by Storerooms and Receptacles Store in a well-ventilated place; provide ventilation for receptacles. Keep stored in accordance with local, regional, national, and international regulations. Information about Storage in One Common Storage Facility Store away from incompatible material(s). Store away from foodstuffs. Avoid release to the environment Avoid release to the environment. · Additional Information No further relevant information. 8 Exposure controls/personal protection **Engineering Measures or Controls** Exposure Limit Values that Require Monitoring at the Workplace 1344-28-1 Aluminum oxide Long-term value: 1 mg/m³ respirable fraction as Aluminum ACGIH Long-term value: 15 TWA total dust mg/m³ OSHA 67762-90-7 Siloxanes and Silicones, di-Me, reaction products with silica OSHA PEL Short-term value: 15 mg/m³ US ACGIH Short-term value: 10 mg/m³ 1333-86-4 Carbon black PEL Long-term value: 3.5 mg/m³ Long-term value: 3.5* mg/m³ *0.1 in presence of PAHs;See Pocket Guide Apps.A+C REL TLV Long-term value: 3* mg/m³ *inhalable fraction Other Engineering Measures or Controls Ventilation rates should be matched to conditions. If applicable, use process enclosure(s), local exhaust ventilation, or other engineering controls to maintain airborne levels below recommended exposure limits. · Personal Protective

General Protective and Hygienic Measures

Avoid any contact with eye. Do not eat, drink or smoke during work. Keep food, drink or feed away from working area. Contaminated work clothing is not allowed out of workplace. Clean hands and exposed skin thoroughly after work and before breaks.

Personal Protective Equipment (PPE)

Breathing Equipment Caution! Improper use of respirators is dangerous.

In case of brief exposure or low pollution, use a respiratory filter device.

Print Date 10/12/2015

Trade Name: EP1121-4 A

Revision Date 10/12/2015

(Contd. of page 3) In case of intensive or longer exposure, use a positive-pressure respiratory protective device that is independent of circulating air. *Hand Protection* Selection of glove material should take into consideration the penetration times, rates of diffusion, and the degradation. Suggested glove type(s): Nitrile Gloves Butyl Rubber Gloves **Eye Protection** safety glasses with side shields and or face shield. **Body Protection** Chemical resistant apron; cover exposed skin.

Additional Information

All protective clothing (suits, gloves, footwear, headgear) should be clean, available every day, and put on before work. The Engineering measures or controls, and PPE recommendations are only guidelines and may not apply to every situation. For additional information, please consult the corresponding requirements under OSHA 29 CFR 1910.94-95, and 29 CFR 1910.132-138.

9 Physical and chemical properties

| Information on Basic Physical an Appearance: | 1 Chemical Properties |

| · Additional Information No | further relevant information. |

10 Stability and reactivity

· Physical Hazard(s) Not a regulated reactive or physical hazard under GHS.

· Hazardous Reactivity and Chemical Stability Stable under normal conditions of use, storage and temperatures.

Thermal Decomposition and Conditions to be Avoided Keep away from incompatible material(s). Thermally decomposes during fire or high heat; keep away from heat, sparks, open flame and other ignition sources.

Possibility of Other Hazardous Reaction(s) May act catalytically with ethylene oxide or vinyl chloride causing irreversible polymerization with considerable heat buildup. · Incompatible Material(s)

Amines. Arinines. Oxidizing agents Vinyl acetate Acids Chlorinated rubber Bases (Alkalis) Nitrates

Hazardous Decomposition Product(s) Thermally decomposes during fire or very high heat. See Section 5 for fire hazards evolved during thermal decomposition.

· Hazardous Polymerization Product(s) No relevant information.

However, inhalative effects can be seen as negligible due to wetted form of the substance. Reference: GHS-J (2006). Ohenol-A-(epichlorohydrin) epoxy resin Target: N/A (guinea pig) (insufficient data for classification) With dermal application of the substance for 55 days, increased seromucoid concentrations, decreased lactate dehydrogenase (LDH), and decreased leucylnaphthylamidase (LNA) were observed in the test animals. Meanwhile, the substance caused a toxic effect on blood components of female guinea-pigs with greater effects on pregnant animals However, there was no detail available regarding the dose level or test guideline, classification was thus not possible. Reference: HSNO CCID (2010). 3-Propanetriyl ester of 12-(oxiranylmethoxy)-9-octadecanoic acid (No data available) xanes and Silicones, di-Me, reaction products with silica (No data available) I Health Effect(s): Causes damage to organs through prolonged or repeated exposure. |

 • Potential Health Effect(s): No relevant information; classification is not possible.

12 Ecological information Aquatic Environmental Toxicity 1344-28-1 Aluminum oxide > 100 mg/l (Selenastrum capricornum) (NOEC (72 hrs), OECD TG 201) Aluchem SDS (2014) Algae Toxicity > 100 mg/l (Daphnia magna (water flea)) (NOEC (48 hrs), OECD TG 202) Aluchem SDS (2014) Crustacean Toxicity > 100 mg/l (Brown trout (Salmo trutta or Sea trout)) (NOEC (96 hrs), OECD TG 203) Reference: IUCLID Dataset (2000). Aluchem SDS (2014) Fish Toxicitv 25068-38-6 Bisphenol-A-(epichlorohydrin) epoxy resin Algae Toxicity (No data available) Crustacean Toxicity 1.4 - 1.7 mg/l (Daphnia magna (water flea)) (EC50 (48 hrs)) 1.41 mg/l (Oryzias latipes (Rice fish)) (LC50 (96 hrs)) 3.1 mg/l (Pimephales promelas (fathead minnow)) (LC50 (96 hrs)) Based on the non-rapid degradability and the acute LC50 < 10 mg/L, the substance is classified as a Chronic-2 environmental hazard. Reference: CHRIP (2010). Fish Toxicity 74398-71-3 1, 2, 3-Propanetriyl ester of 12-(oxiranylmethoxy)-9-octadecanoic acid Algae Toxicity (No data available) Crustacean Toxicity (No data available) Fish Toxicity (No data available) 67762-90-7 Siloxanes and Silicones, di-Me, reaction products with silica > 10000 mg/l (Scenedesmus subspicatus) (ErC50 (24 hrs), OECD 201) Algae Toxicity Crustacean Toxicity > 1000 mg/l (Daphnia magna (water flea)) (EC50 (24 hrs), OECD 202) > 1000 mg/l (Brachydanio rerio (Zebra fish)) (LC50 (96 hrs), OECD 203) Reference: Cabot (M)SDS (2012). Fish Toxicity Aquatic Environmental Toxicity Assessment: Harmful to aquatic life with long lasting effects. Degradability and Stability 1344-28-1 Aluminum oxide non-biodegrad. (Test species: n/a) (As an inorganic and insoluble compound) As an inorganic and insoluble compound, biodegradation of the substance is not expected. Biodegradation (Test species: n/a) (The substance is persistent) Reference: Canada DSL (2007). Persistence Photodegradation (No data available) As an inorganic and insoluble compound, photodegradation of the substance is not expected. stable (Test species: n/a) (As an inorganic and insoluble compound) As an insoluble inorganic metal compound, hydrolysis of the substance is not expected. Stability in water 25068-38-6 Bisphenol-A-(epichlorohydrin) epoxy resin non-biodegrad. (Test species: n/a) (Biodegradation (OECD TG 302B; 28 days) = 12%) (Activated Sludge) (OECD TG 301C; 4 weeks; Conc. 100 mg/L) Biodegradation (Indirect Analysis from BOD) = 0% Biodegradation (Direct Analysis from HPLC) = 0% The substance is non-biodegradable. Reference: CHRIP (2010). Biodegradation (Test species: n/a) (This substance is persistent) Reference: Canada DSL (2007) and CHRIP (2010) Persistence Photodegradation 6.69E-11 cm³/molecule-sec (OH radical) (Half-life (T1/2) = 1.92 hrs) However, photolysis in water is negligible Stability in water (No data available) 74398-71-3 1, 2, 3-Propanetriyl ester of 12-(oxiranylmethoxy)-9-octadecanoic acid non-biodegrad. (Test species: n/a) (Non-biodegradable due to persistent property) Based on the persistent assessment according to Canada DSL, the substance is expected to be non-degradable in the Biodegradation environment. Persistence (Test species: n/a) (The substance is persistent) Reference: Canada DSL (2007). Photodegradation (No data available) Stability in water (No data available) 67762-90-7 Siloxanes and Silicones, di-Me, reaction products with silica (No data available) Biodegradation (Test species: n/a) (The substance is not persistent) Reference: Canada DSL (2007). Persistence Photodegradation (No data available) Stability in water (No data available) (Contd. on page 9)

13 Disposal considerations

Hazardous Waste List
 Description: It may be necessary to contain and dispose of the substance/mixture as a hazardous waste.

Waste Treatment Recommendation: Generation of waste should be avoided or minimized wherever possible. Chemical waste, even small quantities, is neither allowed to be poured down drains, sewage system or waterways; nor disposed with household garbage. Dispose of contents/containers in accordance with local, regional, national, and international regulations.

Unused and Uncontaminated Packagings Recommendation Dispose of according to your local waste regulations.
