Classification System:

Safety Data Sheet acc. to OSHA HCS

The Classification system. The Classifications were based on the Toxicological and Ecological Data of the substances/mixtures in the Section 11 and 12. Additional Information: If the chemical name/CAS number is proprietary and or weight percentage is listed as a range, the specific chemical identity and or percentage of composition has been withheld as a trade secret.

4 First-aid measures

Description of First Aid Measures

General Information Ensure medical personnel are aware of exposure and take precautions for their personal protection; see Section 8 for the information of personal protection.

After Inhalation

Remove victim from exposure to fresh air. Keep person at rest. Provide oxygen if person is not breathing. In case of unconsciousness place patient stably in side position for transportation. Seek immediate medical advice.

After Skin Contact

Remove all contact Remove all contaminated clothing and wash before reuse. Wash contaminated skin with water and soap and rinse thoroughly. Do not pull bonded skin apart. Use a blunt object such as a spoon to gently release the bonded skin. Soaking in warm soapy water will aid with the debonding. Seek immediate medical advice.

 After Eye Contact
 Immediately bathe eyes for 15 minutes under running water.
 Immediately remove contact lenses if present. Continue rinsing.
 If eyelashes are bonded use cloth and warm water to release. Keep eye covered until bond releases. Weeping of the eye is normal and
 will be identified presents. will help aid in the debonding process. Seek immediate medical advice.

After Swallowing

victim is unconscious; never give anything by mouth.

If victim is conscious; rinse out mouth and give victim small amounts of water. Seek medical treatment in case of complaints.

· After Exposure Seek medical treatment in case of complaints.

Information for Doctor Have chemical containers, labels and/or (M)SDS ready when calling or visiting a medical center. Indication of any Immediate Medical Attention and Special Treatment Needed After frequent or high intense exposure, the following medical tests are recommended:

eye tests skin tests

respiratory system tests Check section 11 Toxicological Information for further relevant information.

Additional Information

For additional information, please consult the corresponding first aid measures in the most current version of Emergency Response Guidebook which is produced by the US Department of Transportation.

5 Fire-fighting measures

 Extinguishing Media

 Suitable Extinguishing Agent(s)
 Use fire fighting measures and extinguishing agents that suit the environment. In case of fire, suitable extinguishing agents are: Alcohol resistant foam.

 Dry chemical or fire-extinguishing powder. Carbon dioxide (CO₂). Water spray or water fog. **Unsuitable Extinguishing Agent(s)** No relevant information.

· Firefighting Procedures

Isolate fire and deny unnecessary entry. Eliminate all ignition sources if safe to do so. Do not extinguish fire unless flow can be stopped. Fight fire remotely due to the risk of explosion. Fight fire from protected location or safe distance. Fight fire from protected location or safe distance. Contain fire water runoff if possible to prevent environmental pollution.

Special Hazards Arising in Fire

Caution! Combustible liquid. In case of fire, following can be released: Carbon dioxide (CO_2) and Carbon monoxide (CO) Nitrogen oxides

Advice for Firefighters

If employees are expected to fight fires, they must be trained and equipped as stated in the OSHA fire brigades standard (29 CFR 1910.156). As with any fire, wear positive-pressure self-contained breathing apparatus and full protective gear that are NIOSH approved.

Additional Information Ensure adequate and functional fire fighting facilities equipped in working area at all times.

6 Accidental release measures

Personal Precautions

- Caution! Combustible liquid; wear fire/flame resistant or retardant clothing during cleaning up. Do not breathe gas, vapors, dusts or mists if their inhalable particles occur during use. Ensure personnel take precautions for their personal protection during clean up; see Section 8 for the specific requirements.
- · Environmental Precautions No further relevant information.

Cleaning Up Methods Eliminate heat, sparks, open flame and other ignition sources before clean up. A vapor suppressing foam should be used to reduce vapors at first. All equipment used for clean up must be grounded. Don't touch or walk through spilled chemicals unless trained and equipped as stated in the OSHA fire brigades standard (29 CFR 1910.156). Ensure adequate ventilation. Keep unauthorized personnel away. For large spills: Shut off source of leak if safe to do so. Dike and contain.

Remove with vacuum trucks or pump to storage/salvage vessels. Absorb residues with liquid-binding materials.

For small spills: Ventilate and wash area after clean-up is complete. Collect spills in suitable and properly labeled containers. Do not use solvents unless following safe handling practices and within the recommended exposure guidelines. Dispose contaminated chemicals as waste according to Section 13.

· Additional Information No further relevant information.

7 Handling and storage

Handling

 Precautions for Safe Handling
 Caution! Combustible liquid; keep away from direct sunlight, heat, sparks, flame and other ignition sources during handling. Obtain special instruction before use; do not handle until all safety precautions have been read and understood. Do not breathe gas, vapors, dusts or mists if their inhalable particles occur during handling. Ensure good ventilation and/or exhaustion at workplace.

Ensure good ventilation and/or exhaustion at workplace. Keep away from incompatible material(s). Avoid any release into the environment. Keep container tightly closed when not in use if product is volatile so as to generate hazardous atmosphere. Observe all the personal protection requirements in Section 8. **Information about Protection Against Explosions and Fires** Keep away from heat, sparks, open flame and other ignition sources. Protect against electrostatic charges during handling. Metal containers involved must be grounded and bonded. Use only non-sparking tools and equipment, especially when opening or closing containers of combustible contents.

· Additional Information No further relevant information.

8 Exposure controls/personal protection

Engineering Measures or Controls

Exposure Limit Values that Require Monitoring at the Workplace

7085-85-0 Ethyl 2-cyanoacrylate

TLV Long-term value: 1 mg/m³, 0.2 ppm

Other Engineering Measures or Controls Ventilation rates should be matched to conditions. If applicable, use process enclosure(s), local exhaust ventilation, or other engineering controls to maintain airborne levels below recommended exposure limits.

Personal Protective
 General Protective and Hygienic Measures
 Avoid any contact with eye.
 Do not eat, drink or smoke during work.
 Keep food, drink or feed away from working area.
 Contaminated work clothing is not allowed out of workplace.
 Clean hands and exposed skin thoroughly after work and before breaks.

Personal Protective Equipment (PPE)

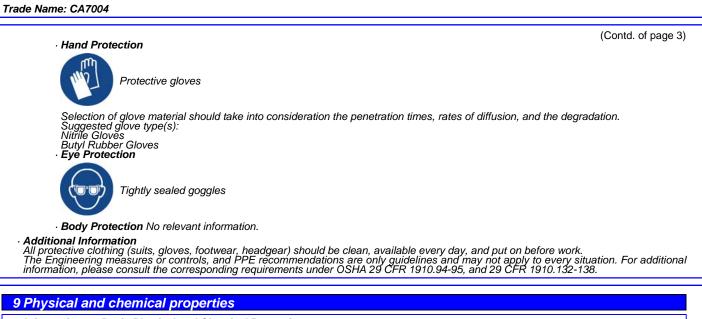

Breathing Equipment Caution! Improper use of respirators is dangerous. In case of brief exposure or low pollution, use a respiratory filter device. In case of intensive or longer exposure, use a positive-pressure respiratory protective device that is independent of circulating air. (Contd. on page

· Additional Information No	further relevant information.

10 Stability and reactivity

· Physical Hazard(s) Combustible liquid.

Hazardous Reactivity and Chemical Stability
 May form explosive vapor-air mixtures when heated above the flash point.
 May decompose, condense, or self-react under conditions of high temperature and/or pressure; but there is little or no potential for heat generation or explosion, or readily undergo hazardous polymerization in the absence of inhibitors.

Thermal Decomposition and Conditions to be Avoided

Keep away from incompatible material(s). Thermally decomposes during fire or high heat; keep away from heat, sparks, open flame and other ignition sources.

· Possibility of Other Hazardous Reaction(s) May polymerize in contact with water or moisture.

 Incompatible Material(s) Amines.

water Alcohols soil Soli Oxidizing agents Strong bases

 Hazardous Decomposition Product(s)
 Thermally decomposes during fire or very high heat. See Section 5 for fire hazards evolved during thermal decomposition. · Hazardous Polymerization Product(s) No relevant information.

13 Disposal considerations

Hazardous Waste List
 Description: It may be necessary to contain and dispose of the substance/mixture as a hazardous waste.

· Waste Treatment Recommendation:

Waste Treatment Recommendation: Generation of waste should be avoided or minimized wherever possible. Chemical waste, even small quantities, is neither allowed to be poured down drains, sewage system or waterways; nor disposed with household garbage. Dispose of contents/containers in accordance with local, regional, national, and international regulations.

Unused and Uncontaminated Packagings
 Recommendation Dispose of according to your local waste regulations.
